1. Introduction

The significance of risk management is inexorably linked to entrepreneurial activities, and these are inseparably tied up with opportunities and risks. Within the framework of external requirements (such as regulations) and the circumstances specific to each company resulting from its business activity, a company's success is influenced by its recognition of opportunities and risks and the way in which it sets about proactively dealing with them. Effective risk management provides a platform to the organization to grow and thrive successfully in all its business endeavors.

Dredging Corporation of India Limited ('DCI' or 'the Company') has identified a need for an efficient and effective risk management process within the company along with necessary documentation which demonstrates management's acceptance of a set of self-regulatory processes and procedures for ensuring the conduct of the business in a risk conscious manner.

Risk management framework comprising of the Risk Management Policy ('the policy') is intended to enable the Company to adopt a defined process for managing its risks on an on-going basis. An important purpose of the policy is to implement a structured and comprehensive risk management system, which establishes a common understanding, language and methodology for identifying, assessing, responding, monitoring and reporting risks and which provides management and the Board of Directors ('the Board') with the assurance that key risks are being properly identified and effectively managed.

The Board shall discharge its responsibility of risk oversight by ensuring the implementation and review of the risk management system within the organization. Board may delegate to any other person or committee the task of independently assessing and evaluating the effectiveness of the risk management system.

This document would be shared with senior and middle management for better understanding and implementation of the risk management process.

2. Risk Management Policy

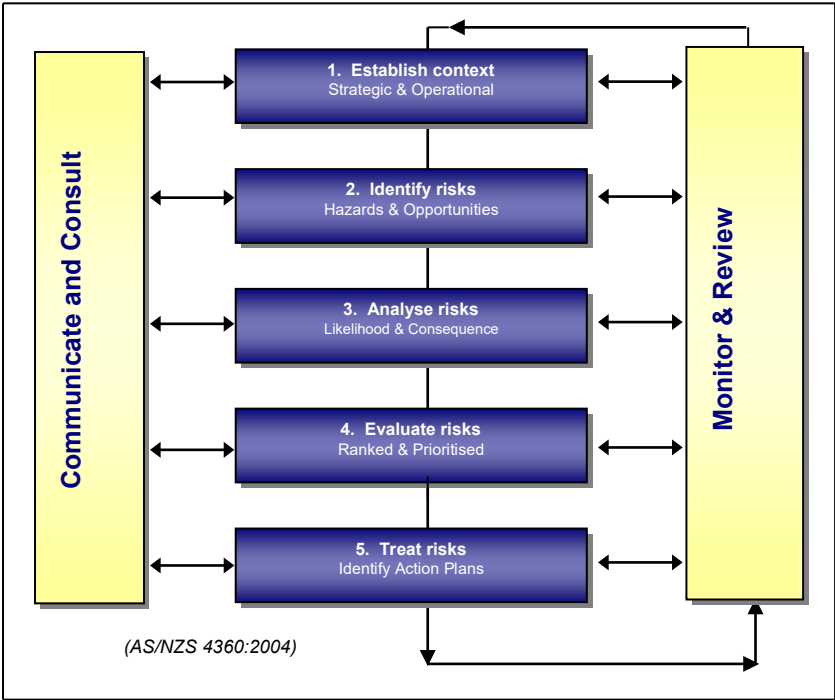

The company is committed to implement a robust risk management process to:

- improve its ability to prevent or timely detect risk event,
- identify, discuss, escalate and provide suggestions to deal with risk issues;
- standardize risk management principles and language across the company;
- improve sharing of risk information
- provide flexibility for managing upside and downside scenarios

This policy is intended to ensure that an effective risk management framework is established and an appropriate reporting mechanism for the same is embedded within the company.

The management shall periodically assess the impact of changes in external and internal environment on the pertinence of this policy. And if the Board deems fit, it may approve necessary changes to this policy to align it with the prevailing business circumstances.

This policy complements and does not replace other existing compliance programs. This policy is built on the established principles of sound risk management as detailed in recognised sources such as the risk management standard AS/NZS 4360:2004.

[Space left blank intentionally]

Risk Management Policy

2.1 Applicability

This policy is applicable from the date as mentioned on the “Document Control Sheet” and applies to whole of the company and includes all functions, departments, business units.

2.2 Risk Management Objectives

The objective of Risk Management is to help management make informed decisions which will:

- Provide a sound basis for good corporate governance;
- Avoid major surprises related to the overall risk and control environment;
- Protect & enhance stakeholders’ value
- Promote an innovative, risk aware culture in pursuit of opportunities to benefit the company
- Promote qualitative and consultative risk taking

2.3 Risk Management Principles

Risk Management is not a onetime event or exercise; rather it is a process which encompasses series of continuous actions that permeate into the activities of the company. Risk management is not an end in itself but rather an important means to develop organizational resilience. The risk management principles applicable to the company are as elaborated below:

- All risk management activity will be aligned to corporate aims, objectives and organizational priorities set by the company
- Risk management in the company shall be proactive and reasoned (dynamic, iterative and responsive to change)
- Risk management shall be systematic & structured to address uncertainty and shall be an integral part of decision making
- Managers and staff at all levels, directly or indirectly, will have a responsibility to identify, evaluate and manage and / or report risks

2.4 Definitions

This Risk Management charter & policy is formed around a common understanding of terminology used in this document.

Risk

Risk is the potential for loss or harm – or the diminished opportunity for gain – that can adversely affect the achievement of an organization's objectives.

Risk may be a direct or indirect effect on an organization resulting from inadequate or failed internal processes, people & systems or from external events.

Gross Risk

Gross / Inherent risk refers to impact of a risk considering that the risk responses / controls are either absent or ineffective

Residual Risk

Risk Management Policy

Residual risk refers to risk remaining after considering existing controls / implementation of a risk treatment plan.

Risk Statement

Risk statement is the description of the risk event(s) along with the likely effect/ impact on the organizational objectives

Contributing Factors

Contributing factors are the possible proximate causes which jointly or severally accentuate the chances of the occurrence of a risk event or increase the level of impact of the risk on the organization.

Risk Management

The systematic process of identifying, analysing, and responding to risk events that have the potential to generate adverse effect on the achievement of organizational objectives.

Risk Analysis

The process of determining the possibility of occurrence of the risk event (Likelihood) and the magnitude of their consequences (Impact) on the organization.

Risk Evaluation

The process used to determine risk management priorities by comparing the level of risk against predetermined standards to generate a prioritized list of risk for further monitoring and mitigation.

Risk Assessment

Risk assessment is the combined process of risk analysis and risk evaluation.

Risk Category

Risks are classified into various categories for better management and control. Each risk category is appropriately defined for the purpose of common understanding. An illustrative list of risk category along with their definitions is attached as **Annexure I**. This list may be modified in future to add / modify new risk categories that may emerge.

Risk Appetite

Risk appetite is defined as the amount of risk, on a broad level an organization is willing to accept in pursuit of value.

Risk Management Policy

2.5 Structure

The Risk Management Structure, roles and responsibilities are set out in Chapter 3.

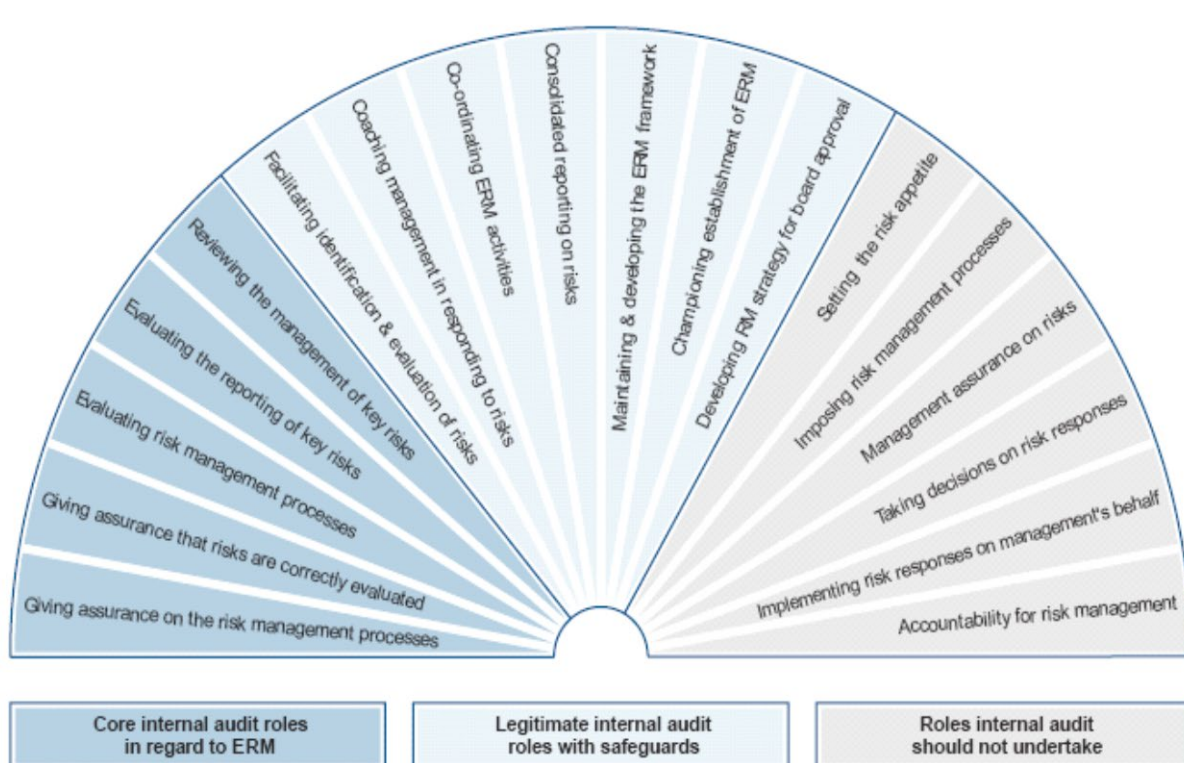

2.6 Risk Management Approach

The Risk Management Approach is explained in detail in Chapter 4.

2.7 Role of Internal Audit Function

The company recognises the synergy and inter-dependence between the internal audit function and the risk management program and wishes to draw up a plan that will ensure that:

- Internal audit plans are drawn up based on outcomes of risk assessment program;
- Internal audit function provides effective, independent and objective evaluation of risk management process at regular intervals;
- Risk management program receives constant inputs on controls evaluation from the internal audit function;

(Taken from "Position Statement: The role of Internal Audit in Enterprise wide risk management" by IIA – UK and Ireland)

2.8 Documentation

Appropriate documentation at each stage of the risk management process shall be followed. This framework provides a guide to documentation standards and how they are to be implemented.

Risk Management Policy

The documentation will serve the following purposes:

- provide evidence of a systematic approach to risk identification and analysis;
- provide a record of risks to support the development of a database of the Company's risks;
- provide risk treatment plans for approval and subsequent implementation;
- provide accountability for managing the risks identified;
- facilitate continuous monitoring and review;
- provide an audit trail; and
- share and communicate risk management information across the Company.

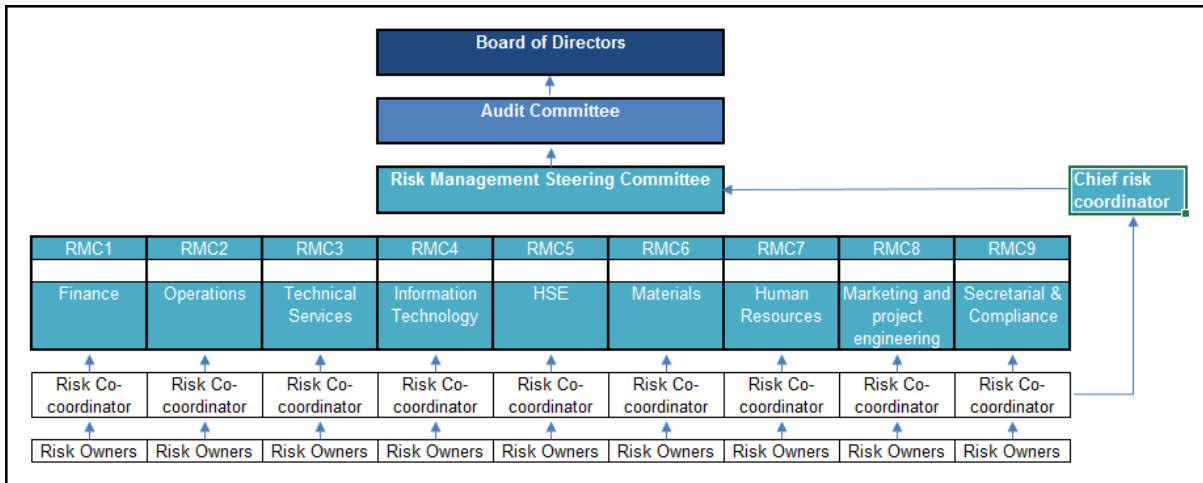

The responsibility for documenting individual risks specific to business functions would be assigned to the functional risk management committee. The designated Chief Risk Officer ('CRO') would be responsible for ensuring that the required documentation required at the corporate level has been developed and maintained up to date. The Risk Coordinators ('RC') at the function level would be responsible for ensuring that the required documentation required at the function level has been developed and maintained up to date.

The key documents pertaining to the risk management process that need to be maintained by the Company are:

- Risk Management Policy
The policy provides the overall framework for risk management process of the Company. Further amendments will be initiated / approved by the Risk Management Steering Committee ('RMSC') and ratified by the Board.
- Risk Register:
Risk register is a consolidated list of all risks that have been identified during the periodical review. It is the key document used to communicate the current status of all known risks and is used for management reviews, control and reporting. The consolidated risk register is owned by the RMSC and will be maintained by the CRO. The functional level risk registers will be owned by the respective Risk Management Committee ('RMC') and will be maintained by the risk coordinators at unit level. A template of the risk register is given as **Annexure II**.
- Risk Management Meeting Template:
The RMSC/ RMC meeting template is used to document the minutes of the periodic RMSC and RMC meetings. The template aids in capturing and documenting the key discussion points and decisions taken during the meetings. A template for RMSC/ RMC meetings is given as **Annexure III**.
- Risk Profile:
Risk profile helps the management and board to effectively monitor the management of the risk faced by the company. It provides detailed description of the risk and related information required for proposing and documenting mitigation plan to reduce the risk exposure. A template for profiling is given as **Annexure IV**.

3. Risk Management Governance Structure

The following diagram gives an overview of the risk management governance structure to be implemented in DCI.

[Space left blank intentionally]

3.1 Risk Management Steering Committee ('RMSC')

The RMSC is the apex committee in the RM governance structure comprising of key decision makers within the organization. RMSC is entrusted with the responsibility of implementing the risk management framework across the organization. RMSC will appraise Board of Directors about various risk management initiatives and ensure adequate reporting of the same to various stake holders on a regular basis.

Membership

The RMSC shall comprise the following:

Head: Chairman & Managing Director

Members:

- Director (Operations & Technical)
- Director (Finance)
- General Manager (Finance)
- General Manager (Marketing) & (Project Engineering)
- General Manager (Operations)
- General Manager (Technical)
- Company Secretary & Compliance Officer

Operation and periodicity of meeting

The designated Chief Risk Co-ordinator / Chief Risk Officer (CRO) will coordinate activities relating to RMSC. The RMSC shall meet on a quarterly basis or more frequently if required for urgent matters. The CRO will act as a convenor for the meetings of RMSC and will be responsible for maintaining the reports of RMSC's activities (agendas, decisions) and minutes of meetings (including attendance).

Roles and Responsibility

At a minimum, the RMSC will perform the following activities:

- Quarterly review of risks
- Ensure required risk documentation is done on quarterly basis
- Provide updates and seek approval from Board of Directors on risk management

3.2 Risk Management Committees ('RMC')

The RMC is the committee, formed at the functional level, in the risk management governance structure comprising of key decision makers within the respective function/unit. It is responsible for adopting and implementing the risk management framework at their respective function/unit.

Membership

The composition of various RMC's within DCI is as given as per **Annexure VI**:

Operation and periodicity of meetings

Risk Management Policy

The RMCs shall meet on a quarterly basis or more frequently if required for urgent matters. Reports of RMC's activities (agendas, decisions) and minutes of meetings (including attendance) will be maintained for each meeting by the risk coordinator as identified by individual RMCs.

The functional heads and other senior personnel may be invited to participate in the committee meetings as required.

Roles and Responsibilities

At a minimum, the RMCs will perform the following activities:

- Quarterly review of function wise risk registers
- Review risk profile document on risk mitigation plan and its implementation status
- Provide updates and seek approval from RMSC on risk management

3.3 Chief Risk Officer (CRO)

The CRO would be a member of the RMSC and be responsible as coordinator for risk management activity for the entire company. The CRO would liaise with the risk coordinators to coordinate flow of information between them and the RMSC. The CRO would be responsible to ensure that meetings of the RMSC are held quarterly or as required, to review the risks identified. The CRO would be responsible to appraise the RMSC and Board of Directors about the status of the risk management at the company.

The Chief Risk Officer (CRO) will be Company Secretary & Compliance Officer

3.4 Risk Owners and Risk Coordinator

Risk owners are individuals who understand the risk better and can contribute in mitigation of the same. Risk owners own, and therefore are deemed accountable for the effective management of risks assigned to them. Each risk will have one risk owner. The risk owners shall put in coordinated efforts to discuss the risks in detail, identify gaps in existing controls and thereby propose risk mitigation plans for the assigned risk. Risk owner is also responsible to implement the approved mitigation plan and periodically review the implementation status of mitigation plans.

The risk coordinators would be a member of the respective RMC's and be responsible as coordinator for risk management activities for their respective functions. The risk coordinator would liaise with the risk owners to coordinate flow of information between them and the RMC. The risk coordinator would be responsible to ensure that meetings of the RMC are held quarterly or as required, to review the risks identified and necessary attendance and minutes of meetings are maintained. The risk coordinator would be responsible to appraise the RMC chairperson and the CRO about the status of the risk management at their respective RMC.

Risk owners and risk coordinator will be nominated by the respective RMC Head.

[Space left blank intentionally]

3.5 Roles & Responsibilities

The risk management roles and responsibilities will be as follows:

Roles	Responsibilities
Board of Directors	<ul style="list-style-type: none"> • Approve risk management policy • Review and approve risk management process and provide inputs/ directions to the executive management • Set 'Risk Appetite' for the Company
Audit Committee	<ul style="list-style-type: none"> • Lead the Risk Management initiative within the company • Set standards for risk documentation and monitoring • Recommend training programs for staff with specific risk management responsibilities • Review and approve the risk management report including selection of critical risks to be put before the Board of Directors
Risk Management Steering Committee ('RMSC')	<ul style="list-style-type: none"> • Lead the Risk Management initiative within the Company • Set standards for risk documentation and monitoring • Recommend training programs for staff with specific risk management responsibilities • Review and approve the risk management report including selection of critical risks to be put before the Audit Committee
Risk Management Committee	<ul style="list-style-type: none"> • Implementing the risk management initiatives across functions • Review implementation of risk management process including identification and assessment of the relevant risks at functional level • Approve and submit risk documents to CRO/ RMSC • Provide updates to RMSC on risk management at RMC level
Chief Risk Officer ('CRO')	<ul style="list-style-type: none"> • Implementing the risk management initiatives across the entire organization • Liaise with the risk coordinators to coordinate flow of information and escalation of key risk issues/concerns between the RMSC and Risk Coordinators • Ensure that meetings of the RMSC are held regularly • Prepare and maintain relevant documentation for the Company and present it to the Board of Directors of the company.
Risk Coordinator	<ul style="list-style-type: none"> • Liaise with the risk owners to coordinate flow of information and escalation of key risk issues/concerns between the RMC and Risk Owners • Ensure that meetings of the RMC are held regularly • Prepare and maintain relevant documentation for the RMC and submit the same to CRO

Risk Management Policy

Roles	Responsibilities
Risk Owners (RO)	<ul style="list-style-type: none"> • Ensure preparation of a suitable risk mitigation plan keeping in mind the current controls mechanism in place, proposed mitigation measures and organizational priorities • Ensure that the risk profiles are filled and key risks are escalated to the respective RMC for their approval of proposed mitigation plan • Ensure that the approved plans are implemented within the target timeframe and reported regularly
Employees	<ul style="list-style-type: none"> • Assist in complying with risk management policy adopted by the company • Responsible for identifying and escalating risks to the next level • Exercise reasonable care to prevent loss, to maximize opportunity and to ensure that the operations, reputation and assets are not adversely affected

A summary chart displaying the activities to be followed periodically is given below:

Roles	Periodicity of Meeting	Activities		
		<i>Quarterly</i>	<i>Half-Yearly</i>	<i>Yearly</i>
Risk Owner	-	<ul style="list-style-type: none"> • Review and update Risk Profiles and report to Risk Coordinator 	-	-
Risk Coordinator	-	<ul style="list-style-type: none"> • Update Risk Registers and report to RMC • Present updated Risk Registers & Risk Profiles to CRO on behalf of RMC 	-	-
Risk Management Committee (RMC)	Quarterly	<ul style="list-style-type: none"> • Review of Risk Registers & Risk Profiles 	-	-
Chief Risk Officer	-	<ul style="list-style-type: none"> • Update consolidated Risk Register (Collation of risks submitted by RMCs for escalation) • Present a detailed analysis of critical risks & risk profiles to the RMSC • Present 	<ul style="list-style-type: none"> • Present top risks areas as identified by RMSC to the Board 	<ul style="list-style-type: none"> • Develop a ERM implementation status report and present it to the Board

Risk Management Policy

		consolidated Risk Register & Risk Profiles to the Board		
Risk Management Steering Committee	Quarterly	<ul style="list-style-type: none"> Review of consolidated Risk Register & Risk Profiles 	-	<ul style="list-style-type: none"> Review of Risk Appetite Statement
Board of Directors / Audit Committee	Half-Yearly	-	<ul style="list-style-type: none"> Review of top risk areas 	<ul style="list-style-type: none"> Review the progress of ERM implementation Approval of Risk Appetite Statement

4. Risk Appetite

Organizations encounter risk every day as they pursue their objectives. In conducting appropriate oversight, management and the board of the company are responsible for describing, how much risk is acceptable in pursuing these objectives. To fully embed ERM in an organization, decision makers must know how much risk is acceptable as they consider ways of accomplishing objectives, both for their organization and for their individual operations (division, department, etc.)

4.1 Approach

Defining a risk appetite statement starts with analyzing the long-term and short-term goals of the company. The company should be able to identify its strategic and tactical objectives. Based on the strategic and tactical objectives a broad - level statement depicting the overall risk appetite of the organization shall be defined. In addition, risk tolerance levels for the following broad organizational objectives shall also be defined:

- Strategic
- Operational
- Reporting
- Compliance

DCI's risk appetite and risk tolerance is given in section 4.3 below

4.2 Responsibility

The Board shall be responsible for defining the risk appetite statement for the company.

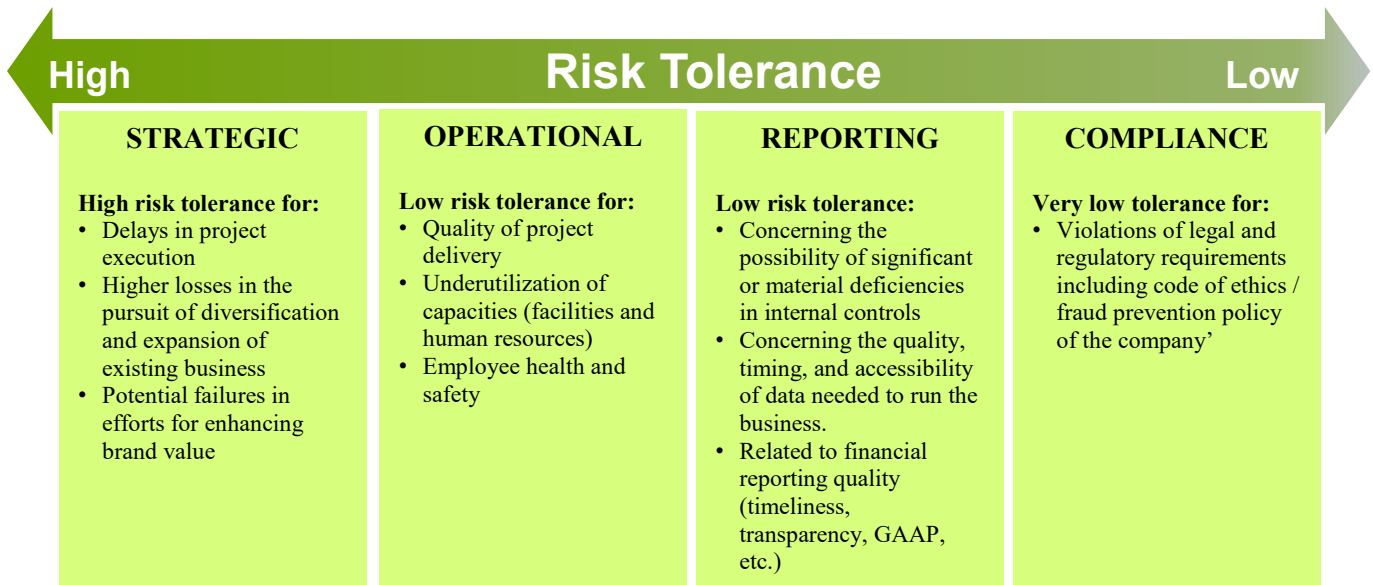

The Risk Management Steering Committee shall be responsible for reviewing the risk appetite of the company on a yearly basis and revising the same based on changes in internal/ external business environment and stakeholder expectations. Any changes made to the risk appetite needs to be approved by the Board.

4.3 DCI's Risk Appetite

The prevailing risk appetite statement for the company is defined as follows:

The Organization operates within a low overall risk range. The Organization's lowest risk appetite relates to operational, compliance and reporting objectives, with a marginally higher risk appetite towards its strategic objectives.

This means that reducing to reasonably practicable levels the risks related to project delivery and productivity. Meeting legal & compliance obligations will take priority over other business objectives.

5. Risk Management Process

5.1 Risk Identification

Risk Identification is a process of identifying risks for assessment, evaluation and determination of appropriate action plans. A systematic process of comprehensive risk identification is the foundation on which edifice of Risk Management is built.

The company may use following tools & methodologies to identify new risks that may have emerged or risks that would have changed over a period of time:

- Structured workshops;
- Brainstorming sessions;
- Interviews by CRO and / or the Risk coordinators;
- Review of loss event;
- Review of documents.

All identified risks shall be updated in a risk register. Risk registers shall be quarterly reviewed and updated by the respective Risk Management Committees to ensure pertinence of the risks listed. Risks that would have ceased shall also be closed appropriately. The CRO and Risk Coordinators shall ensure that the risk registers are reviewed and updated quarterly.

5.2 Risk Assessment

The risks shall be assessed on qualitative two-fold criteria. The two components of risk assessment are:

- a) The likelihood of occurrence of the risk event, and
- b) The magnitude of impact if the risk event occurs.

The combination of likelihood of occurrence and the magnitude of impact provides the risk level. The magnitude of impact of an event (shall it occur), and the likelihood of the event and its associated consequences, are assessed in the context of the existing controls.

In determining what constitutes a given level of risk the following scale is to be used for likelihood:

Levels	Descriptors
5	Very High Likelihood
4	High Likelihood
3	Moderate Likelihood
2	Low Likelihood
1	Very Low Likelihood

In determining what constitutes a given level of risk the following scale is to be used for impact:

Levels	Descriptors
5	Very High impact
4	High impact
3	Moderate impact
2	Low impact
1	Very low impact

Risk assessment criteria for DCI is given as per Annexure V

5.3 Risk Evaluation

For each risk, the average score for likelihood and impact shall be multiplied to arrive at a combined score. In case the rating of risks is done by a group, average of the group's score shall be determined. The average is to be determined for each component of risk assessment viz., Likelihood and Impact. The simple average for each component of each risk shall be calculated.

Example for Calculation of Group Score:

Rating of Risk X

	Likelihood (A)	Impact (B)
Participant 1	2	5
Participant 2	3	5
Participant 3	4	5
Total	9	15
Group Score i.e. Simple Average (Total / No. of Participants)	3	5
Combined Score (Group Score A*Group Score B)	15	

Risk Management Policy

The risk would be classified into one of the three zones based on the combined score.

- Risks that score within a red zone are considered “Critical / High / Unacceptable” and require immediate action plans to deal with the risk. (Average score 12 and above)
- Risks that score within the yellow zone are considered “Cautionary / Medium” where action steps to develop or enhance existing controls is also needed. (Average score in the range of 6 and less than 12)
- Risks that score within the green zone are considered “Acceptable / Low”. (Average score less than 6).

Note: The boxes with value 5 have been included in the Yellow (Cautionary) zone due to very high likelihood / impact scores.

The output of a risk evaluation is a prioritized list of risks for further action.

The objective of risk assessment and risk evaluation is to assist the organization in prioritizing risk treatment strategies to ensure that appropriate attention is given to risks based on their criticality and that Company resources are effectively utilized in managing these risks.

[Space left blank intentionally]

5.4 Risk Treatment / Action Plan

The risk mitigation plan adopted by the company would also depend on the vulnerability factor. Vulnerability is the extent to which the organization may be exposed in relation to various risk factors after existing controls have been taken into consideration. Vulnerability differs from the likelihood as likelihood only considers the probability of an event occurring whereas vulnerability also considers other aspects such as control effectiveness and level of preparedness to deal with risks.

Risk treatment involves identifying the range of options for treating risk, assessing those options, preparing risk treatment plans and implementing them. Treatment options may include:

- *Avoidance* – Exiting the activities giving rise to risk. Risk avoidance may involve exiting a product line, declining expansion to a new geographical market, or selling a division.
- *Acceptance* – No action is taken to mitigate the risk or reduce the likelihood or impact.
- *Reduction* – Developing mitigation plan to reduce risk exposure.
- *Transferring* - Includes purchasing insurance products, engaging in hedging transactions, or outsourcing an activity.

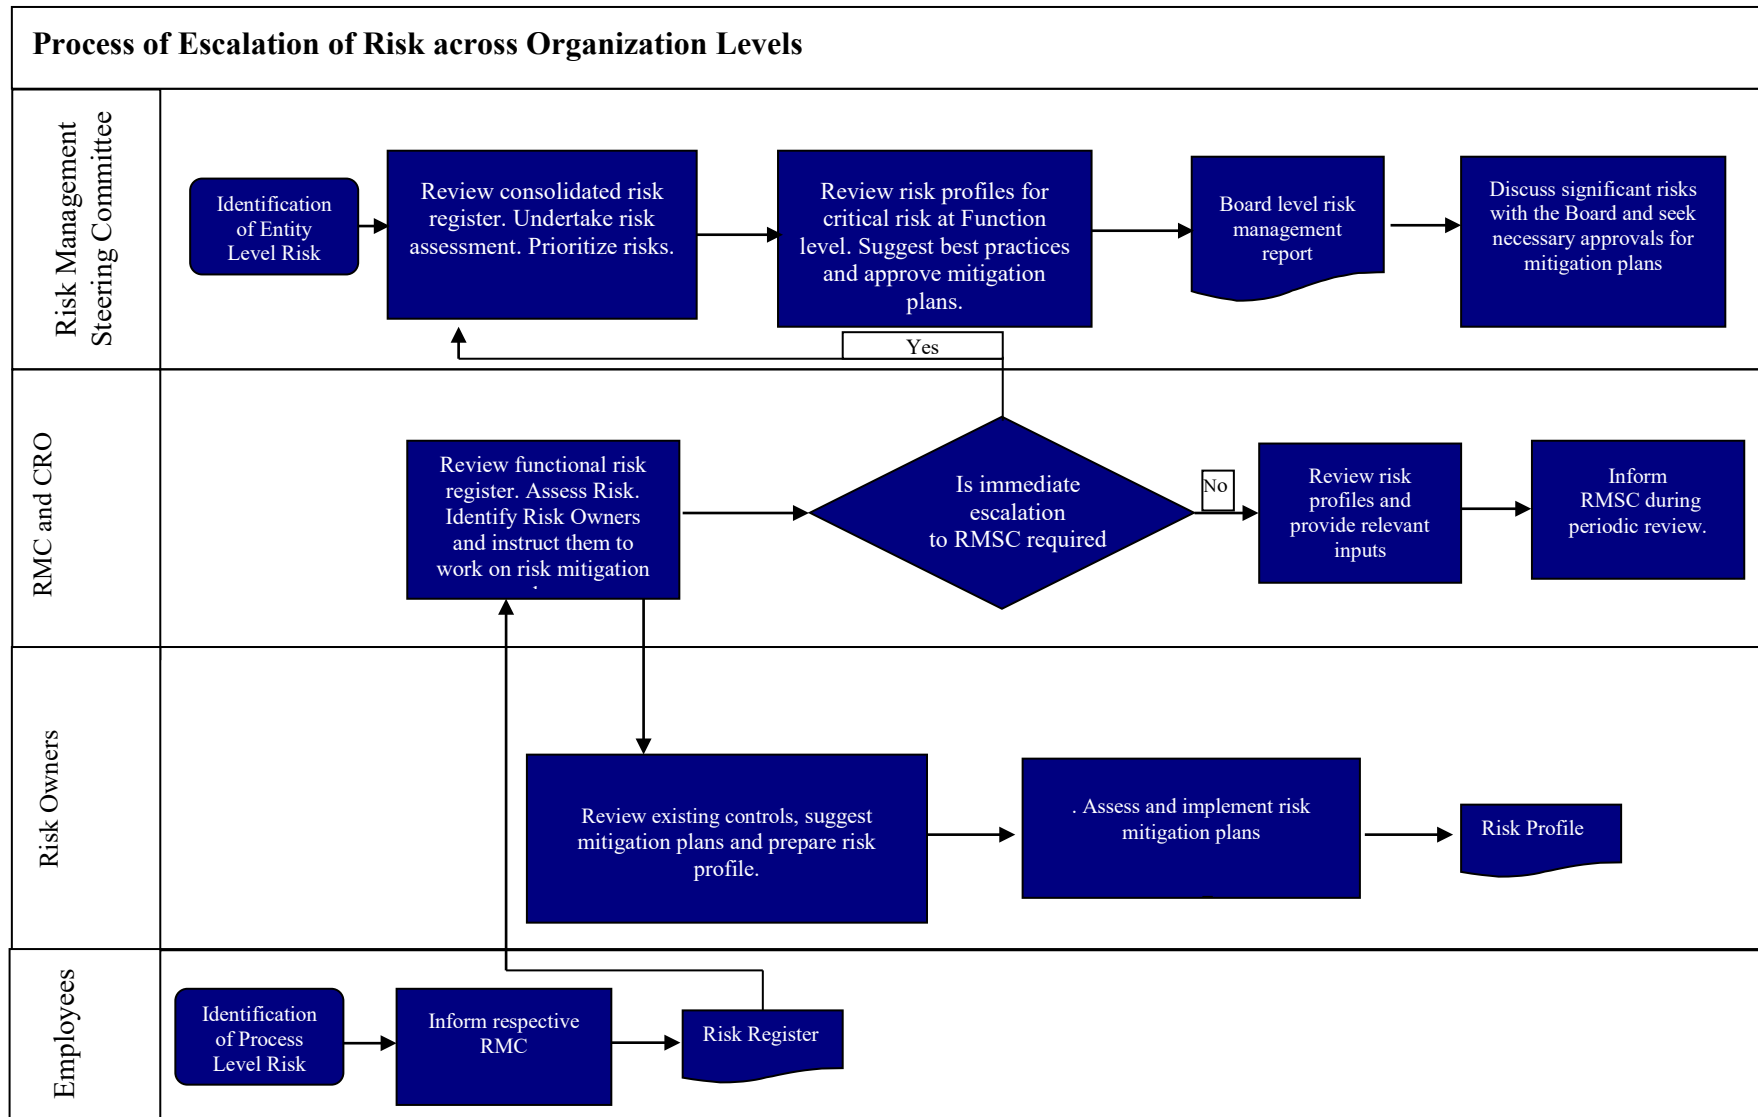

Mitigation plan for each risk shall be documented in the risk profile template provided in **Annexure IV**. The profile contains details of the risk, its contributing factors, risk scores, controls documentation, and specific and practical action plans. Action plans need to be time bound and responsibility driven to facilitate future status monitoring. Mitigating practices and controls shall include determining procedures and processes in place and additional resource allocation that will ensure that existing level of risks is brought down to an acceptable level. In many cases significant risk may still exist after mitigation of the risk level through the risk treatment process. For risks considered to be “acceptable” risk profile will be developed with mitigation plan as accepted and no further actions required.

5.5 Escalation of risks

It is critical to institute an effective system of escalation which ensures that specific issues are promptly communicated and followed up appropriately. Every employee of the Company has responsibility of identifying and escalating the risks to appropriate levels within the Company. After the risk is identified upward escalation of the same will be as below:

- Risk management committee head to select risks to be escalated which primarily will be of following types:
 - Critical risks relevant to the function wherein the complete mitigation is possible at RMC level
 - Critical interdependent risks wherein intervention of RMSC/Board is required for smooth implementation of the mitigation plan. It is desired that risk owner prepares risk mitigation plan at the unit/function level for such risks which may be considered by RMSC/Board for integrated response/mitigation plan.
- The CRO shall select risks to be escalated to RMSC based on the inputs received from respective RMCs. This would include:
 - Risk submitted by individual RMCs as critical for their respective function
 - For critical interrelated risks the CRO need to present to the RMSC, an aggregate/consolidated view of the risks after thorough analysis and consultation with RMC heads of relevant Business Unit/ Corporate Function
- RMSC will review the risks submitted by CRO and will identify and escalate strategic risks to the Board

Overall escalation and information flow within the Company will be as follows:

5.6 Risk Reviews

Ongoing review is essential to ensure that the management plans remain relevant. Factors, which may affect the likelihood and impact of an outcome, may change, as may the factors, which affect the suitability or cost of the various treatment options.

Risk review aims at assessing the progress of risk treatment action plans. It also ensures that the current assessments remain valid. The risk register shall be reviewed, assessed and updated on a quarterly basis by the RMSC.

The risk owners shall periodically review the risks owned by them to ensure that ratings remain pertinent and to monitor the status of action plans. The CRO shall periodically review the risk register, risk profiles and status of action plans.

5.7 Closure of risks:

A risk issue identified and documented shall not be deleted from risk registers and shall be closed after the approval of respective RMC, due to any one of the following reasons:

- *Risk mitigated:* The risk is mitigated to the desired extent.
- *Risk not relevant:* The risk is not relevant/applicable due to change in external business environment
- *Risk transferred:* The risk has been transferred to some other RMC

6. Reporting

A report comprising of top critical risk areas (including mitigation plans) duly approved by the RMSC, shall be placed before the Board. The format of such a report may be as suggested by the board. On an annual basis, the Board would review the progress of risk management implementation (including areas such as training requirements, process improvisation etc.).

[Space left blank intentionally]

Annexure I: Illustrative list of risk categories

Sr. No.	Risk Classes / Baskets	Definitions
1.	Strategy	Risks associated with strategy development, strategic alliances, business planning, business model, growth, reputation, innovation and performance targets.
2.	Marketing and Sales	Risks associated with developing, implementing, and managing new and existing products, customer service, pricing, marketing and feasibility of new business opportunities.
3.	Project Management	Risk associated with planning, organizing and managing resources to bring about successful completion of specific project goals and objectives.
4.	Human Resource (HR)	Risks associated with culture, organizational structure, communication, recruitment, performance management, remuneration, learning & development, retention, OH&S and industrial relations, including supporting systems, processes, and procedures.
5.	Corporate Planning	Risk associated with a lack of defined policies, processes, procedures or delegations of authority at a group, business unit or product area.
6.	Budgeting/ Forecasting	Risks associated with, budgeting, management reporting and cost management.
7.	Information Technology (IT)	IT risk include issues like IT strategy, architecture, infrastructure, networks, support systems, interfaces, data reliability, access controls disaster recovery
8.	Information Security	Risk associated with data loss, fraud, system outages, breach of confidentiality, legal/regulatory violations, as well data integrity.
9.	Finance	Financial risks include risks associated with capital structuring, capital allocation, financial management, debtor's management, forex, hedging and preparation of financial statements.
10.	Contract Management	Risk associated with any partnerships, governmental contracts, concessions, treaties through which an organization conducts business, production-sharing agreements and side-agreements.
11.	Compliance	Risk relating to noncompliance with legislation, regulations, supervision, internal policies and procedures.
12.	Legal & Regulatory	Failure of infrastructure processes, systems, and resources to support legal and regulatory requirements.
13.	Materials	Risks associated with procurement process, internal and external logistics and transportation, quality controls,

Risk Management Charter and Policy

Sr. No.	Risk Classes / Baskets	Definitions
		outsourcing and vendor relationships
14.	External Factors	The risks associated with eexternal factors like political, economic /markets, social, technological, legal and regulatory, fraud, and environmental conditions pose threat to the organization.
15.	Environment, Health and Safety	This category includes risks related to environment pollution, safety of resources and employees' health, etc.
16.	Reporting	Risk associated with collection of data from internal and external sources and relate to quality and integrity of the data Risk associated with timely and accurate disclosure of data / information like annual reports, MIS to internal and external stakeholders
17.	Business Continuity Planning/ Disaster Recovery	Risk associated with the organization's ability to design, develop, test and implement a strategy to mobilize critical staff during a business interruption, as well as recover infrastructure and data.
18.	Operations	Risk associated with core dredging operations

This list may be modified in future to add / modify new risk categories that may emerge.
